

# Combination lock 1841/1842

The new STRENGER combination lock **1841/1842** offers two variants of use.

**1841** is the variant with the multi-user function (one-timer). Coding by the respective user allows the lock to be opened once, so that the next user has to set his personal code.

**1842** is used for standard use. A user, e.g. in office management, is assigned a locker and can freely choose the numerical code and change it individually at any time.

It also offers more free space due to its narrower contour.

## Product details

- 4-wheel number combination with 10,000 possible combinations
- Flat structure, slim design
- Emergency opening in seconds with master key
- No user code management required
- Different key systems possible
- Easy, quick assembly
- Patented functions according to DE 50 2010 004 511.2
